

TERENZUOLA

NUOVE GEOMETRIE TRA LIGURIA E TOSCANA

Colli di Luni D.O.C. Vermentino Vermentino Bianco

Varieties

95% Vermentino, 5%Albarola.

Vineyards

Located in Fosdinovo, at 50-100 mt a.s.l.. The soils are rich in pebbles in most of the particles.

Cultivation

Guyot breeding with a density of 8.400 plants per hectare as regards the youngest implants and of 7.000 plants per hectare for the oldest implants.

Harvest

Hand-picked in the different areas as soon as the grapes reach the right level of ripeness all over the month of September.

Vinification

Soft systems for the grapes' reception, long-cycle direct pressing, static decantation and low temperatures fermentation; the following aging process is made on its own yeasts for three months into steel vats.

Bottling

It takes place in February to enhance the fruit and the wine is released on the market after a few weeks.

Yield per hectare

85 quintals of grapes per hectare.

Alcohol content

13% vol.

Produced bottles

70.000
